Room Readiness and Front Desk Exception Report

Bring room status disagreements into one review queue.

HOSPITALITY SYSTEMS

Working portfolio demo

ROOM READINESS

Six fictional rooms

101 Available	**102** Needs cleaning	**103** Occupied
104 Occupied	**105** Out of service	**106** Available

EXCEPTION QUEUE

102 Cleaning needed

105 Out of service

2 ready / 2 occupied

2 exceptions to review

THE PROBLEM

Front desk and housekeeping can each have a plausible status for the same room. Staff need the disagreement surfaced before a guest is assigned to a room that is not ready.

WHAT YOU CAN INSPECT

Of six fictional rooms, 101 and 106 are available. Rooms 103 and 104 are occupied. Room 102 needs cleaning; room 105 is out of service. The original inputs are left unchanged.

HOW THE SAMPLE WORKS

Each record is checked for a unique room ID and valid states. A vacant, clean room is available; a dirty or out-of-service room enters the exception queue. Occupied rooms remain occupied.

A PRACTICAL FIRST PROJECT

Start with a read-only export comparison: agree on room-state mappings, generate a discrepancy list, and let a manager approve any corrections.

A standalone reconciliation sample, not the full FrontDesk Lite PMS or an integration that edits room inventory.
